

# How to create ipa without Apple Developer Programmer in Xcode7?

- 1) Clean your project.
- 2) Build your project.
- 3) Go to products menu -> select build for -> select Profiling.
- 4) In project navigator, find your .app product.
- 5) Right click on it and click show in finder.
- 6) There you will find folder naming "Release-iphones", in this folder you will find your .app extension file.
- 7) Create a folder named "Payload", copy that .app file in this folder.
- 8) Archive your folder.
- 9) After archive, rename your folder to name of your app and change its extension from ".zip" to ".ipa"
- 10) Your ipa is ready for sharing.
