

How to clone all repos at once from GitHub?

I created a sample batch script. You can download all private/public repositories from github.com. After a repository is downloaded, it is automatically converted to a zip file.

```
1 @echo off
2 setlocal EnableDelayedExpansion
3 SET "username=olyanren"
4 SET "password=G....."
5 set "mypath=%cd%"
6 SET "url=https://%username%:%password%@github.com/%username%/"
7 FOR /F "tokens=* delims=" %%i in (files.txt) do (
8 SET repo=%%i
9 rmdir /s /q !repo!
10 git clone "!url!!repo!.git"
11 cd !repo!
12 echo !mypath!
13 git archive --format=zip -o "!mypath!!repo!.zip" HEAD
14 cd ..
15 )
```

Note: files.txt file should contain only repository names like:

```
1 repository1
2 repository2
```
