

# How to Set Environment Variables in Ubuntu

Open Terminal and run following command:

```
1 sudo gedit ~/.profile
```

Add this line into the bottom of the profile file:

```
1 export MAIL_SERVICE_3DES_PASSWORD=1wasdfsd
```

After adding the line, save and close the file, then run following command to immediatly update the profile file:

```
1 . ~/.profile
```

Lastly close the terminal, open a new Terminal and check this variable is set or not:

```
1 echo $MAIL_SERVICE_3DES_PASSWORD
```

If this file is not updated, please logout and login
