

Mysql Replace Function Usage

If you want to change some string content of a column, you can use **REPLACE** function as follow:

```
1  UPDATE urls
2  SET url = REPLACE(url, 'domain1.com/images/', 'domain2.com/otherfolder/')
```

urls: Table Name

url: Column Name

REPLACE function first parameter is column name, second parameter string value to be changed, and third parameter is new string value.
